No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 4, Application US/09419163

Patent No. 6391614

GENERAL INFORMATION:
APPLICANT: Tomasz, Alexander
APPLICANT: Delencastre, Herminia
TITLE OF INVENTION: MUXILIARY GENES AND PROTEINS OF
TITLE OF INVENTION: METHICILLIN RESISTANT BACTERIA AND ANTAGONISTS THEREOF
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
                                                                                                                     Score 37; DB 2; Length 463;

US-09-323-99BE-58
Sequence 58, Application US/0932399BE
Sequence 58, Application US/0932399BE
Patent No. 6642021
GENERAL INFORMATION:
APPLICANT: CUNNINGHAM UR., FRANCIS X.
APPLICANT: CUNNINGHAM UR., FRANCIS X.
TITLE OF INVENTION: METHODS OF USE THEREOF
TITLE OF INVENTION: METHOD OF USE THEREOF
TITLE OF INVENTION INVERSE: US/09/323,99BE
CURRENT APPLICATION NUMBER: 09/088,724
PRIOR APPLICATION NUMBER: 09/088,725
PRIOR APPLICATION NUMBER: 09/088,725
PRIOR APPLICATION NUMBER: 09/088,725
NUMBER OF SEQ ID NOS: 62
SOFTWARE: PATENTIN VEY: 2.1
SEQ ID NO 58
LIBRICHT: SOO
APPLICANT: CUNNINGHAM JR., FRANCIS X.
APPLICANT: CUNNINGHAM JR., FRANCIS X.
APPLICANT: SUN, ZAIREN
TITLE OF INVENTION: GENE OF CRROTENOID BIOSYNTHESIS AND METABOLISM AND
TITLE OF INVENTION: METHODS OF USE THEREOF
FILE REFERENCE: 108172-09019
FILE REFERENCE: 108172-09019
CURRENT FILING DATE: 1999-06-02
PRIOR APPLICATION NUMBER: 09/088,724
PRIOR APPLICATION NUMBER: 09/088,725
PRIOR APPLICATION NUMBER: 09/088,725
PRIOR FILING DATE: 1998-06-02
NUMBER OF SEQ ID NOS: 62

Sequence 3767, Application US/09134000C
Patent No. 6617156
GENERAL INFORMATION:
APPLICAMY: Lynn Doucette-Stamm et al
APPLICAMY: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTERCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: UNDER: US/09/134,000C
CURRENT APPLICATION NUMBER: US/09/134,000C
CURRENT FILING DATE: 1998-08-13
REIOR APPLICATION NUMBER: US 60/055,778
PRIOR FILING DATE: 1997-08-15
NUMBER OF SEQ ID NOS: 6812
SOFTWARE: PatentIn version 3.1
                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ۲;

Sequence 16, Application US/08943173

Patent No. 6648538

GENERAL INFORMATION:
APPLICANT: Wang, Chang Yi
APPLICANT: Shen, Fan
APPLICANT: Chen, Pel De
TITLE OF INVENTION: PEPTIDES DERIVED
TITLE OF INVENTION: PROM THE NON-STRUCTURAL PROTEINS OF
TITLE OF INVENTION: PROM THE NON-STRUCTURAL PROTEINS OF
TITLE OF INVENTION: PROM THE NON-STRUCTURAL PROTEINS OF
TITLE OF INVENTION: DIAGNOSTIC REAGENTS
NUMBER OF SEQUENCES: 16
CORRESPONDENCE ADDRESS:
ADDRESSEE: Maria C.H. Lin
STREET: 345 Park Avenue
CITY: New York
STREET: NY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 19;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      6; Indels

Sequence 6, Application US/0909932

Sequence 6, Application US/0909932

Patent No. 657001

General Information:

APPLICANT: Bl Solh, Nevine

APPLICANT: Allignet, Jeanine

TITLE OF INVENTION: COMPOUNDS

CURRENT APPLICATION NUMBER: US/09/099,932

CURRENT PILING DATE: 1998-06-19

CURRENT PILING DATE: 1998-06-20

NUMBER OF SEQ ID NOS: 50

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 6

LENGTH: 295
                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 6, Application US/09446301A

Patent No. 6506893

GENERAL INFORMATION

APPLICANT: ALLIGNET, JEANINE

TITLE OF INVENTION: POLYNUCLEOFIDES AND THEIR USE FOR DETECTING RESISTANCE

TITLE OF INVENTION: POLYNUCLEOFIDES AND THEIR USE FOR DETECTING RESISTANCE

TITLE OF INVENTION: TO STREPTOGRAMIN A OR TO STREPTOGRAMIN B AND RELATED

TITLE OF INVENTION: COMPOUNDS

FILE REFERENCE: 03715-0059

CURRENT PAPLICANTION NUMBER: US/09/446,301A

CURRENT FILING DATE: 1999-12-20

NUMBER OF SEQ ID NOS: 51

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 38
15.09-323-998E-55
5. Application US/09323998E
Patent No. 6642021
GENERAL INFORMATION:
APPLICANT: CUNNINGHAM JR., FRANCIS X.
APPLICANT: SUN, ZAIREN
TITLE OF INVENTION: METHEN OF CAROTENOID BIOSYNTHESIS AND METABOLISM AND
TITLE OF INVENTION: METHENS OF USE THEREOF
FILE REFERENCE: 108172-09019
                                                                                                                                           Sequence 2, Application US/0845855;
Fatent No. 5840689;
General INFORMATION:
APPLICANT: Daniloff, Joanne K
APPLICANT: Meintjes, Elmarie
TITLE OF INVENTION: Method for Stimulating the Regrowth of
TITLE OF INVENTION: Neurons
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:

R) Latreille, P: Wamaley, P: O'Brien, D.

Submitted to the EMBL Data Library, July 1998

A)Description: The sequence of C. elegans cosmid H34124.

A)Reference number: 221340

A)Accession: T33408

A)Accession: T33408

A)Residues preliminary: translated from GB/EMBL/DDBJ

A)Molecule type: DNA

A)Residues: 1-262 < Latra

A)Festerences: EMBL:AF078784; PIDN:AAC26925.1; GSPDB:GN00021; CESP:H34124.2

A)Experimental source: strain Bristol N2; clone H34124

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ayreletter and an anotation; X-ray crystallography, 2.7 angstroms, residues 3-475
A;Note: native Fe(III) with NADPH
A;Note: 1249, 333-954, 1995
A;Title: Crystal structure of Proteus mirabilis PR catalase with and without bound NADPH
A;Reference number: A58664; MUID:95311317; PMID:7791219
A;Contents: annotation; X-ray crystallography, 2.2 angstroms
C;Complex: homotetramer
C;Function: Appendix at allography a confacture of molecules of hydrogen peroxide to two A;Note: this enzyme has a tightly bound NADPH cofactor.
C;Superfamily: catalase
C;Keywords: chromoprotein; heme; homotetramer; iron; metalloprotein; NADP; oxidoreductas
F;53/Modified site: methionine sulfone {Met} #status experimental
F;54,33,127/Active site: His, Ser, Asm #status predicted
F;337/Binding site: heme iron (Tyr) {axial ligand} #status experimental

I. FUNCTION: Decomposes hydrogen peroxide into water and oxygen;
Serves to protect cells from the toxic effects of hydrogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BY SIMILARITY.

Cloning, sequence analysis and chromosome localization of a prosphila muscarinic acetylcholine receptor.";

Thousophila muscarinic acetylcholine receptor.";

ERBS Lett. 255:219-225(1989).

- FRINCTION: THE MUSCARINIC ACETYLCHOLINE RECEPTOR MEDIATES VARIOUS CELLULAR RESPONSES, INCLUDING INHIBITION OF ADENYLATE CYCLASE, BREAKDOWN OF PHOSPHOINOSTIDES & MODULATION OF POTASSIUM CHANNELS THROUGH THE ACTION OF G PROTEINS. PRIMARY TRANSDUCING EFFECT IS TITUNOVER.

- IT TURNOVER.

- SUBJECTIONS THE GENERAL HORDING INTEGRAL Membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EMBL; M27495; AAA86449.1; -.

-!- STBUNIT: The nucleosome is an octamer containing two molecules
each of H2A, H2B, H3 and H4. The octamer wraps approximately 146
bp of DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
